Live build your submarine

Submarines vs ROVs

Pilots: 3 people
Depth: 4.000 m
Weight: 2.500 kg

<https://www.youtube.com/evnautilus>

<https://ciechanow.ski/naval-architecture/>

Archimedes Principle:

Any object, totally or partially immersed in a fluid or liquid, is buoyed up by a force equal to the weight of the fluid displaced by the object.

Boyle-Mariotte law:

At constant temperature (and “low pressure”) the volume of a gas mass is inversely proportional to its pressure.

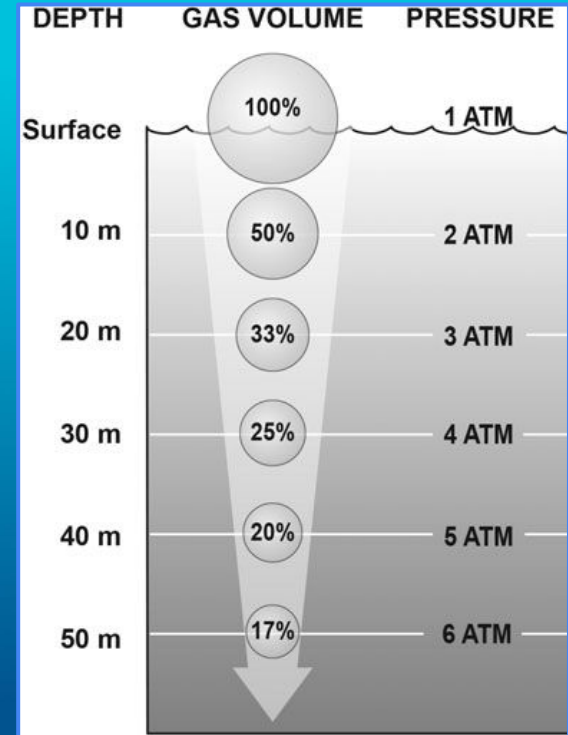

$$P_1 * V_1 = k = 1.5 = P_2 * V_2$$

Summary

Firmware

FIRMWARE

QGroundControl can upgrade the firmware on Pixhawk devices, SiK Radios and PX4 Flow Smart Cameras.

Plug in your device via USB to start firmware upgrade.

Found device: Pixhawk
Connected to bootloader:
Version: 4

Welcome to BlueOS!

Before you start, we highly recommend [connecting to the internet](#) and performing a [system update to the latest available BlueOS version](#).

Available Services

List all available services found in BlueOS serving http interfaces, and their respective API documentations.

File Browser

Browse all the files in BlueOS. Useful for fetching logs, tweaking configurations, and development.

Log Browser

Allow browsing the Telemetry (.tlog) and Binary (.bin) logs generated by your vehicle. Bin logs are currently only supported for Navigator boards.

MAVLink Inspector

View detailed MAVLink traffic coming from your vehicle.

Network Test

Test link speed between topside computer and your vehicle.

System Information

Detailed system status information, CPU, memory, disk, and ethernet status.

Terminal

A web-based console. Used mainly for debugging and development.

Autopilot Firmware

Update flight controller firmware, select the active autopilot, and start/stop ArduPilot (if using Navigator or SITL).
